

**Wohl Coatings Inc.**  
**Applied Industrial High Performance Grade Epoxy Coatings**  
**For Shops, Garages, Airplane Hangers**

These are the same coatings that you see in the auto dealerships and Nascar Race Shops. Manufacturing Solutions uses only the highest quality epoxy systems.

- Step One: Prepare the surface. The concrete surface must be free of all oil and grease. MFGS power cleans the surface with TSP solution to remove the oil and grease. In some cases it is necessary to acid etch the surface to provide an adequate bonding surface for the coating.
- Step Two: The cleaned surface is allow to dry and become completely free of water before proceeding.
- Step Three: The coating is carefully applied by brush and roller to a smooth finish. MFGS uses only high quality two component semi-gloss epoxy finishes designed for garage floors.
- Step Four: The coating is allowed to cure for 24 hours with good ventilitation before being ready for full traffic. During the application and curing period good ventilation must be maintained.
